Hurricane, is recognised as a name connected with quality wire products and innovation in fencing products since 1932. We have supplied New Zealand's residential and commercial developments, infrastructure projects and rural communities for close to 90 years with hard wearing products made to last in New Zealand's harsh environment.

The first field trial of Hurricane's high tensile boundary fence was conducted in secret near Wanganui in February 1963. The resilience of this fencing and the way it could be erected on undulating ground proved to be outstanding and led to the biggest-ever success in fabricated farm-fence development in New Zealand. The later introduction of Hurricane deer fence established New Zealand as an exporter of market leading innovative fencing-systems.
